Air Emissions

CO₂ is a “greenhouse gas” which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. Nitrogen Oxides also react to form ground level ozone, an unhealthful component of “smog”

Source	Lbs. per MWh	Percentage of PJM
Nitrogen Oxides (NO_x)	0	0 %
Sulfur Dioxide (SO₂)	0	0 %
Carbon Dioxide (CO₂)	0	0 %

This disclosure is required by the Maryland Public Service Commission

The following environmental information is for Tomorrow Energy customers with Standard Offer Service. Standard Offer Service is provided to those customers who have not chosen an alternative electricity supplier.

Power Plants can generate electricity from a number of different fuel sources, resulting in different emissions. Tomorrow Energy will report fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity in Maryland.

The provided Standardized Environmental data is from the dates of January 2023 through December 2023.
